### CNC Wire Forming Machinery

Concept Wire Industries now has in its range of machinery, the latest, state of the art 3 dimensional wire forming machine. With a capability from 3.0mm up to 12.7mm, we can now meet the most demanding requirements regarding wire forming.

Whether you require square frames, card pockets, tight radii, or spirals, there is practically no job too hard for our CNC wire forming machine.

The interactive touch screen allows us to make minor adjustments whilst the machine is running, as well as making programming quick and operator friendly.

All programmes and designs are stored either internally or on a memory stick, thereby ensuring consistency and accuracy time and time again. This also ensures minimum set up and change over times.

CNC wire forming is the best way of producing small to medium runs due to minimum tooling requirements, minimum set up time on repeat orders and consistent and accurate repeatability.
