

Concept

WIRE INDUSTRIES

NO BALLS-NO GOOD

There have been significant quality issues with Auto bagtie twisting tools in the market of late.

The NEW Concept Wire Industries twisting tool is the only model on the market that is designed to last the distance in industrial and construction environments.

Our tool has a machined shaft with a helix radius groove that accommodates 4 ball bearings. Other machines have a standard shaft with a square groove and sliding bush that wears out with regular use.

Insist on the best, INSIST on the CONCEPT tool!!!
